

SELF-TANNING SPRAY FOR FACE AND BODY

IGEPAK S.A., a contract filler and company with a wide expertise in the development and formulation of aerosol products has developed a new SELF-TANNING SPRAY that delivers evenly an ultra-light and odourless self-tanning mist with an immediate effect. It gives instant colour and produces gradually a natural golden tan within the next 24 hours that lasts nearly 7 days.

A WAY TO TAN SKIN WITHOUT DAMAGING IT

This formula contains Dihydroxyacetone (DHA), a sugar-based, colorless, molecule that interacts with the upper layer of the epidermis, generating almost instantly a very natural tanned complexion. It is completely harmless for skin and health. Tan will gradually darken over the next 24 hours. This makes it an ideal product to achieve a natural tan without exposure to harmful UV rays. For face and body and for all skin types. The self-tanning spray allows to manage the tanning intensity according to the amount and frequency of the application. Coloured formula for an easier use and a homogeneous and harmonious tan. Fast drying and transfer-resistant.

HOW TO USE THE SELF-TANNING SPRAY FOR FACE AND BODY

Shake vigorously and spray evenly on clean, dry skin moving the can in circular motions at a distance of approx. 20 cm on the body and, closing eyes, on the face. Protect hair and clothes as needed. Remove excess product from eyebrows with a dry cotton or tissue. Allow to dry before getting dressed so as not to stain clothes. Wait 8 hours before wetting the skin to avoid removing the product. If the product gets on the palms of the hands or the soles of the feet, wash with soap and water as soon as possible.

For a homogeneous tan, exfoliate your body the day before applying the self-tanner, and use a moisturizing lotion, especially on the knees, elbows, ankles and at the level of the hair line, just before the application of the self-tanning mist, to avoid darkening these areas in excess.

IGEPAK S.A. offers turnkey tailor-made solutions from developing, producing and filling aerosols to delivering anywhere in the world. It also provides support regarding existing regulations The Company's facilities include: White room, water treatment plant (osmosis and CDI), seven fully automatic filling lines. Three of these lines are prepared for filling with the B.O.V. system.
