

NO-RINSE HAND SANITIZER FOAM

IGEPAK S.A.U., a contract filler with ample experience in the development and production of aerosol products, has developed a new NO-RINSE HAND SANITIZER FOAM which disinfects the hands without having to wash them and provides a silky soft touch. With a creamy, light texture, this alcohol-based formula with a disinfectant effect, is quickly absorbed so as not to leave the hands greasy. This product is mainly for cosmetic use. It provides a pleasant cleanliness and sensation of freshness. A perfume can be added so that the hands are slightly scented.

IT DISINFECTS THE HANDS WITHOUT THE NEED FOR WATER

This ultra-lightweight foam disinfects and takes care of the hands. No water or rinsing is needed. It penetrates quickly, leaving the skin sanitized, soft and well cared for thanks to the dermoprotective, softening and moisturizing properties of glycerine and aloe vera, which gives the hands a velvety touch and a feeling of cleanliness and freshness. Ideal for taking away or leaving in the car for use anywhere and at anytime to prevent the spread of possible infections while at the same time taking care of the hands thanks to the absence of aggressive surfactants. It is a skin-friendly product.

DIRECTIONS:

Shake well before use. With the can upright, squeeze a small amount of foam onto your hand. Massage the foam into the skin and let it absorb. Do not rinse. For frequent use.

IGEPAK S.A.U. offers turnkey tailor-made solutions from developing, producing and filling aerosols to delivering anywhere in the world. It also provides support regarding existing regulations. The Company's facilities include: a white room, a water treatment plant (osmosis and CDI) and seven fully automatic filling lines. Three of these lines are prepared for filling with the B.O.V. system.
